

监控及数据采集系统
Supervisory Control And Data Acquisition

SCADA监控及数据采集系统

SCADA产品能够实现与GIS对接，具有遥调、遥信、遥测和遥控功能，使燃气管网生产、输配管理更加安全、准确、高效

产品特点

使用DYNAC ES系统，具有更加安全、可靠、稳定的性能,优异的可扩展性及开放架构

新功能

- 管网阴极保护
- 远程阀门控制

产品定位

规模，管控点	500点以上，采集所有点（压力、温度、压差、流量、阀位、泄漏、液位、控制点等）
监控功能	遥调、遥信、遥测和遥控
适合类型	中大型客户，覆盖面广，监控点多

SCADA (Supervisory Control And Data Acquisition)

SCADA can be integrated with GIS, providing remote regulating, remote signaling, remote sensing and remote controlling functions. With SCADA, gas pipe network production and transmission becomes safer, more accurate and efficient

Product features

DYNAC Enterprise Server (ES) provides a more secure, reliable and stable performance, outstanding compatibility and open architecture

New functions

- Pipeline cathodic protection
- Remote valve control

Product positioning

Scope, control point	500 pointer above, full data collection (pressure, temperature, different pressure, flow, valve, leakage, level, control point, etc.)
Monitor and Control	remote regulating, remote signaling, remote sensing and remote controlling
Applicability	Medium to large size companies with high coverage and control points
